Our Services

Lithographic Printing

Still the mainstay of large print runs, our lithographic department produces high quality printed products. From paper as light as 46 gram to board as heavy as 450 gram, these presses are geared to consistently deliver high volume, colour consistent products such as Magazines, Books and packaging material.

Digital Printing

With the advent of digital printing it is now possible to deliver shorter print runs and faster turn-around times producing more cost effective solutions than in the past. But more importantly, digital print has improved dramatically and we no longer have to sacrifice quality, thus enhancing value for those who wish to print on a tight budget or where the market demands a smaller print run. Typical short run jobs will be books, flyers, business cards, training manuals and financial reports.

Large Format Printing

Large format or wide format has transformed from plotters to serious production machines that are able to print across a range of substrates in varying widths and lengths. Substrates of up to 50 meters in length can be printed in one print run. Decals can also be cut in-line reducing production times. Colours are exceptional and tones are warm with crisp images. Typical print runs will include Pull-up Banners, Wall Banners, Posters, Canvasses, Wall Papers, Decals, Stickers and more.

Packaging Print

If you need to move product, brand it or display it we have a solution. We print on a variety of substrates, finish and pack in-house, facilitating tight deadlines whilst maintaining quality throughout. From conception to shelf, we are geared to offer you the right solution at the right price.

Finishing

Finishing refers to any off-press work require to complete a job. This could be folding, scoring, die-cutting, embossing, laminating, varnishing and stitching or perfect binding. Our facility offers an on-site finishing department, facilitating the production process and allowing for faster turnaround times while maintaining quality throughout.
